1. INTRODUCTION

PROINSO PV RACK offers solutions Structures, MORE ROBUST, FLEXIBLE, AND MORE COST-EFFECTIVE.

PROINSO PV RACK has been customizing to have an easy assembly with high quality materials. All our products come in a little box that contains all items necessary in the installation of the product.

PROINSO PV RACK designed for multiple wind speeds, terrain category as respective to locations. For higher wind speed, hill side and cyclonic conditions additional Brackets are suggested for installation.

2. DESCRIPTION SYSTEM

PROINSO PV RACK rooftop PV structures are made of hollowed aluminum profiles bolted together, with enough ability to support photovoltaic modules with standard commercial dimensions. These profiles with the aluminium triangles allow the lifting of the structure until desired inclination, what allows PROINSO PV RACK adapting their kits to the majority of existing roofs.

The versatility of the roof system from the PROINSO PV RACK firm allows an easy adaptation to most locations, complying with the applicable regulations in each area of installation.

Roof systems from PROINSO PV RACK firm allow a quick assembly. All elements are easily manipulated by the workshop staff.

Structure systems are made up of 6063-T5 Aluminium and Anchorages of CORROSHIELD BRAND Self Drilling Screw, which gives a higher durability to the system.

3.2 Mounting Process

In order to perform the assembly process, assembly drawings will be provided by PROINSO PV RACK. Before starting the assembly of the whole installation, it is recommended to assemble an individual kit in order to make position marks for the different components. Before starting the assembly of the structure, it is necessary to check that all required components and tools are ready to start the process.

All necessary steps for the assembly of the components that make up the kit, after installing anchorages roof, are described below.

3.2.1 Assembly of the concrete pads:

Previous to the installation of the structure, have to be done a concrete slabs which dimensions recommended by a local engineer depending the location of the project. At the same time the concrete is poured an anchorage should be embedded with the enough distance out of concrete to permit install the fixed with DIN 6923 M8 A2 nuts. To install the triangle structure just take screws into the holes prepared fixed with DIN 6923 M8 A2 nuts.

Correct position for the triangles should be checked in the corresponding kit drawing.

NEEDED TOOLS AT THIS POINT ARE:

- Open end wrench no 13 or torque wrench with socket no 13.
3.2.2 Assembly of structure onto aluminium triangles:

The placement of profiles that support PV modules is performed using the slotted holes the aluminium triangles have at the top part.

In order to assemble the profiles, DIN 933 M8 A2 bolts have to be introduced in the profile slots as shown in the image and fastened to the triangles in the correct position through DIN 6923 M8 A2 nuts.

The proper positions for profiles will be at the upper and intermediate slotted holes as shown in the corresponding kit drawing.

NEEDED TOOLS AT THIS STEP ARE:
• Open end wrench no 13 or torque wrench with socket no 13.

3.2.3 Junction between aluminium profiles:

The joint between two aluminium profiles that form the structure is performed with an aluminium plate with 4 holes, using 4 DIN 933 M8 A2 bolts and 4 DIN 6923 M8 A2 nuts to secure them as shown in the image.

Firstly, the bolts are inserted loosely in the plate as displayed on the image. Then, half of the plate is inserted at the end of the first profile, assuring that two bolts are inserted at the bottom slot. Subsequently, tighten these two bolts to fix the plate to the first profile.

Secondly, the end of the second profile will be inserted until it stops with the first one, also guaranteeing that these two bolts are inserted at the bottom slot. Finally, the proper torque setting to every fastener will be given.

NEEDED TOOLS AT THIS STEP ARE:
• Open end wrench no 13 or torque wrench with socket no 13.
3.2.4 Assembly of PV modules onto aluminium profiles:

Installation of PV modules directly onto aluminium profiles is performed when the required disposition of PV modules is in portrait.

PV modules will be fixed at 4 attachment points, as shown in the kit drawing.

The assembly of PV modules is performed with “L” aluminium pieces (individual fixations), “U” aluminium pieces (double fixations), DIN 912 M8x70 A2 bolts, DIN 6798A M8 A2 washers and M8 A2 spring nuts as shown in images above.

NEEDED TOOLS AT THIS STEP ARE:

• Hexagonal wrench 6mm.

3.2.5 General considerations:

Torque settings for fasteners:
1. M8 nuts and bolts: 23 Nm.
2. M10 nuts and bolts: 43 Nm.

PV modules attachment points:

Attachment points of PV modules are approximately at ¼ of the longest side measured from the end of the module, always prevailing manufacturer recommendations over this issue.

Minimum distances for anchorages position:

The minimum distance to be kept from the end of the aluminium profile to place any anchorage or fixation is 50mm.

4. DO’S AND DON’TS:

• Installation of PROINSO PV RACK intended to be Performed by Trained Installers.

• Please Ensure all Safety Equipment shall be use by Installers.

• Please Ensure Substructure, Super Structure of Roof can with stand load of PROINSO PV RACK and Live load during Installation.

• Do not modify any Product of Proinso PV RACK without any Prior Approval by Engineers.

• Please follow recommended instructions of solar module manufacturer during handling and installation.

• Please ensure Solar module can Install on Rail one at a time, Please take care for slipping of module.
